

Delta-dodecahedron

2015

A **delta dodecahedron** is a polyhedron having 12 faces each of which is an equilateral triangle.

To make

Cut out along all the 'solid' lines. Score and crease along the 'broken' lines.

Fold it up into position (without glue) so as to get an idea of how it will look.

Glue the tabs in the order they are numbered, using the 'Sticking order' table to make sure of getting the tabs glued to the correct faces in the beginning, the later ones are more obvious.

Make sure the calendar appears on the outside of the shape being made!

Sticking Order	
Glue months of	Onto tab(s) number
August	1
January	2
November	3
